Review

I need someone nearby
right now

- Spots water leaking under the sink
- Panics about floor damage
- Opens Vello app

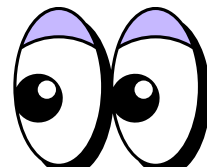

This is exactly the filter I need

Are any of these people
reliable?

- Look at the filter section and play with them
- Selects "Handyperson" filter
- Browses available local providers

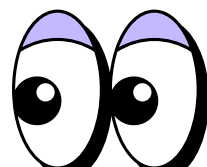

He looks like he can fix my
problem

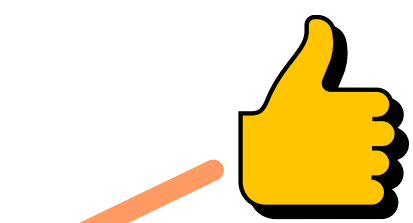

Can I trust this person with my
address and keys?

- Reads provider cards
- View more details about the person he trusts the most
- Read all the detailed information about the provider, including previous reviews
- Book the time and date for the service

I must be aware of him
while he is working

- Provider arrives at the doorstep
- Performs the repair

Okay, he did a good
job, i'll pay him

- Look at the total to pay
- Review Vello service fee
- Pay to the plumber

71\$? That is expensive

How can I rate him?

- Looking for a way to rate Devon in app

Fragile Trust Flag

This is the moment where the user transitions from browsing digital cards to **inviting a stranger** into their private home. If Vello shows generic ratings or anonymous reviews the user will not trust enough
